## Appraiser Blog

When we think of car safety, airbags and crash-test ratings come to mind. But in 2024, there's so much more to consider. New safety technologies are changing the game, helping prevent accidents before they happen. Let's explore some of the safest cars of 2024 and the often-overlooked features that make them stand out.

### Active Safety: Why Prevention is Key

Many articles focus on **passive safety**—things like airbags and seat belts that protect you during an accident. But **active safety** is just as important. Active features, like **automatic emergency braking** and **lane-keeping assist**, help prevent crashes altogether.

According to the IIHS, active safety systems can cut rear-end collisions by 50%. Yet, they don't always get the spotlight they deserve.

#### Safest Cars of 2024: Unexpected Stars

Some brands are known for safety, but a few cars in 2024 deserve extra attention. Here are some lesser-discussed models:

# Appraiser Blog

## 1. Genesis G90

While Genesis doesn't get as much buzz as some luxury brands, the **2024 G90** is packed with advanced safety tech. It has features like **highway driving assist** and **blind-spot collision avoidance**, making it one of the safest luxury sedans out there.

## 2. Mazda CX-90

Mazda's **CX-90** is equipped with **i-Activsense**, which includes **driver attention alerts** and **rear cross-traffic warnings**. It's not just safe but also a fun SUV to drive—something families will appreciate.

## 3. Volvo XC90

The **Volvo XC90** has been a leader in safety for years. With its **Pilot Assist** feature, it helps with stop-and-go traffic, reducing driver fatigue. Volvo's focus on real-world safety, not just crash-test scores, makes this SUV stand out.

## 4. Subaru Ascent

The **2024 Subaru Ascent** is a safety powerhouse, thanks to Subaru's **EyeSight Driver Assist** system. It includes **automatic braking** and **lane-centering**. What's more, its **STARLINK** system contacts emergency services after a crash, something not often highlighted.

## Overlooked Safety Features You Should Know

Beyond crash ratings, some lesser-known features are true game-changers:

### 1. Night Vision Systems

Available in high-end cars like the **Cadillac Escalade**, these systems detect pedestrians or animals in the dark. Perfect for rural or low-visibility areas, but rarely talked about.

### 2. Driver Monitoring Systems

Systems like **Tesla's Autopilot** and **Cadillac's Super Cruise** monitor the driver's focus. If the system detects distraction or drowsiness, it sends an alert or takes action to keep you safe.

### 3. Traffic Sign Recognition

Cars like the **Toyota Highlander** can read road signs and display them on the dashboard. This feature is especially handy in unfamiliar areas, making sure you don't miss speed limits or stop signs.

## Final Thoughts: What Makes a Car Safe in 2024?

The safest cars in 2024 don't just protect you during a crash—they help avoid accidents in the first place. Automatic braking, lane-keeping assist, and other active safety features are becoming standard but don't always get the attention they deserve.

Cars like the Genesis G90, Mazda CX-90, Volvo XC90, and Subaru Ascent combine advanced safety tech with solid crash protection. They prove that safety isn't just about numbers; it's about real-world performance.

So, what safety features are you looking for in your next car?
